

# **Board/Authority Authorized Course Framework Template**

School District/Independent School Authority Name:	School District/Independent School Authority Number (e.g. SD43, Authority #432):
Chilliwack School District	School District #33
Developed by:	Date Developed:
Richard Tagle	February 5, 2004
School Name:	Principal's Name:
Sardis Secondary	Bob Patterson
Superintendent Approval Date (for School Districts only):	Superintendent Signature (for School Districts only):
Board/Authority Approval Date:	Board/Authority Chair Signature:
Course Name:	Grade Level of Course:
Principles of Strength Training	11 and 12
(Formerly Strength and Conditioning)	
Number of Course Credits:	Number of Hours of Instruction:
4	120

Board/Authority Prerequisite(s): Physical and Health Education 10

**Special Training, Facilities or Equipment Required:** Weight room with machine and free weights (Olympic), classroom, track, skipping ropes, plyometric boxes, treadmills, exercise bikes, elliptical machines and aerobic exercise equipment.

**Course Synopsis:** This course will be offered (linear or semester) throughout the year for grades 11 and 12. It will allow students to improve their strength by lifting weights, performing plyometric drills, and running drills. This course is intended for students wanting to improve their overall strength and fitness, develop a lifestyle that will maintain a healthy body for a lifetime and to learn the general principles of strength training.

**Goals and Rationale:** There are many physiological and psychological benefits to strength training (The Physician and Sports Medicine. Vol 26-No. 5 – May 1998). Some of those include: Improved self-esteem and confidence, increases in bone strength/density and improved functional strength for sports and daily activities. Strength training for sport has never been more popular. Many students express the desire to be on an

official weight training program. Students will also learn other ways to enhance and develop their athletic skills. Regular PE courses only cover weight training in a generic and simplistic fashion. This course covers strength training in much greater detail. Principles of Strength Training focuses on compound lifting techniques and on improving physical performance.

# **Aboriginal Worldviews and Perspectives:**

Learning is holistic, reflexive, reflective, experiential, and relational (focused on connectedness, on reciprocal relationships, and a sense of place).

Learning involves patience and time.

Learning requires exploration of one's identity.

Learning involves recognizing the consequences of one's actions.

Course Name: Grade:

# **BIG IDEAS**

Compound lifting movements are essential for increasing functional strength.

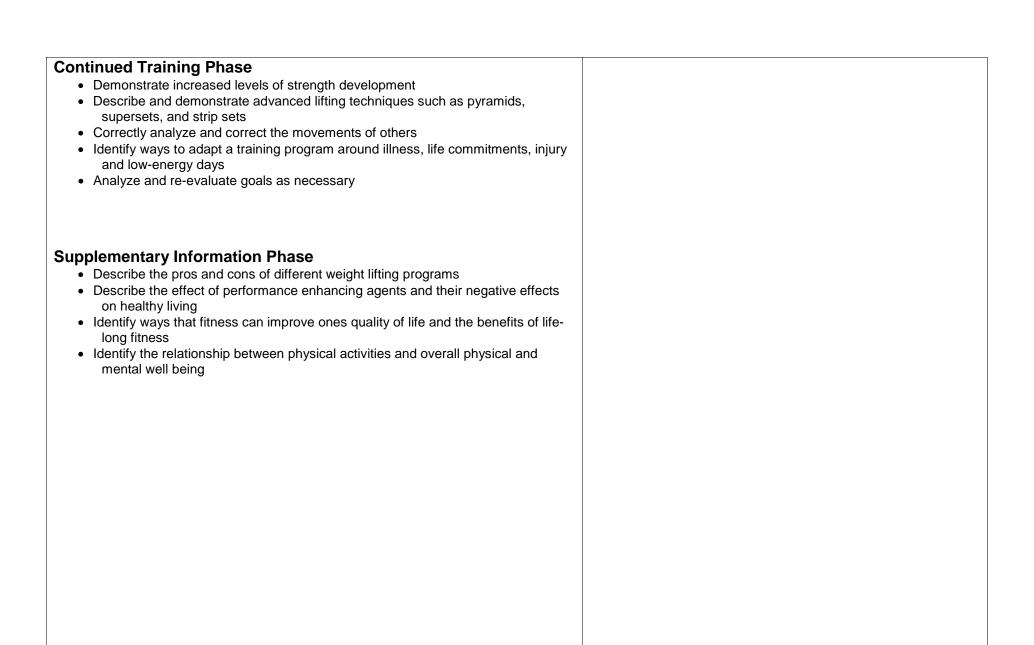

Relationship between nutrition and the specific goals of the individual student. Proper lifting technique is essential for safety and progression.

The human body adapts to overload and fatigue.

Training program design is dependent upon specific goals and desired outcomes.

# **Learning Standards**

Curricular Competencies	Content
Students are expected to do the following:  Exercise Program Design  Develop different weight training programs based on different goals Incorporate compound movements into training programs Identify and describe different training techniques Use correct terminology for equipment and muscle groups Demonstrate correct lifting and stretching techniques Set short and long term personal goals  Initial Training Phase  Demonstrate and describe the importance of developing core muscles Demonstrate and describe the importance of compound movements Demonstrate appropriate conduct and safety procedures in the weight room Describe and demonstrate circuit training and a general body workout Apply weightlifting nutritional strategies to maximize progression Analyze and re-evaluate goals as necessary	Students are expected to know the following:  Correct form for the main compound movements  Bench press  Military press  Pull-up  Squat  Dead lift  Row  Basic human anatomy  Timing of macro nutrients to maximize increases in lean
	<ul> <li>body mass</li> <li>High Intensity Interval Training and its role in strength training</li> <li>When and how to apply advanced training techniques such as pyramids or strip sets</li> <li>Overtraining symptoms and prevention</li> <li>Weight room etiquette and safety procedures</li> <li>Correct spotting techniques</li> <li>Correct form for all exercises</li> <li>Progressive overload is necessary for continued development</li> <li>Supplements can be dangerous</li> <li>Critique of exercise programs</li> </ul>

# **Big Ideas - Elaborations**

# Compound lifting movements are essential for increasing functional strength

Sample questions/opportunities to support student inquiry

- How are compound lifts related to movements in daily life?
- Why are compound lifts the most effective way to improve strength and body composition?

# Relationship between nutrition and the specific goals of the individual student.

Sample questions/opportunities to support student inquiry

- How is the timing of macronutrients related to increased strength and lean body mass?
- Which supplements have been proven to be safe and effective?
- What changes do I need to make to my diet?

### Proper lifting technique is essential for safety and progression

Sample questions/opportunities to support student inquiry

- How does proper technique prevent injury?
- How does proper technique lead to improvements in strength?

# The human body adapts to overload and fatigue

Sample questions/opportunities to support student inquiry

- Why is progressive overload necessary within a strength training program?
- How is fatigue and perceived exertion related to improvements in strength and endurance?

# Training program design is dependent upon specific goals and desired outcomes

Sample questions/opportunities to support student inquiry

- How is defining personal fitness goals necessary for effective program design?
- How can one's fitness goals change during their lives?
- Why do fitness goals change over time?
- Why is setting S.M.A.R.T. goals important?

## **Curricular Competencies – Elaborations**

### **Exercise Program Design**

Sample opportunities to support student inquiry:

- How are an individual's goals related to the design of training programs (sport specific, hypertrophy, weight loss)?
- How can you identify and correct common lifting movement mistakes in yourself and others?
- What are the correct movement patterns for compound lifts?

# **Initial Training Phase**

Sample opportunities to support student inquiry:

- Why are compound lifts considered to be the most important for overall development of strength?
- How does core strength and stability decrease the risk of injury and increase athletic performance?
- How does the timing of different macro nutrients lead to improvement of strength?

#### **Continued Training Phase**

Sample opportunities to support student inquiry:

- Is my workout plan still effective for my current goals?
- How much has my strength improved?
- Can I identify and correct movement pattern errors?

# **Supplementary Information Phase**

Sample opportunities to support student inquiry:

- How do different exercise programs lead to different strength outcomes?
- How has strength training improved my quality of life?
- What are some general concerns related to health while participating in strength training?

#### **Content – Elaborations**

Correct form for compound movements

- Squat
  - Back extension
  - Slight supination of feet, weight on heels
  - Prevent inward knee collapse
  - Eyes up, shoulders back
- Bench Press
  - Neutral spine
  - Grip width
  - Range of motion
  - Hand and wrist position
- Military Press
  - Back against bench
  - Hand and wrist position
  - Range of motion

#### **Content – Elaborations**

- Pull-up
  - Type of grip
  - Full extension
  - Preventing momentum
- Dead Lift
  - Back extension
  - Grip width and type
  - Eyes up
  - Feet wider than shoulders
- Row
  - Slight back extension
  - Elbows close to sides
  - Range of motion

### Correct names for muscles groups

• Biceps, Triceps, Pectorals, Lattisimus Dorsi, Deltoids, Quadriceps, Hamstrings, Calves, Abdominals, Core, Back Extensors

Timing of macro nutrients to maximize increases in lean body mass

- Pre-workout food
  - Higher carbohydrate content with moderate protein 30 to 100 minutes before workout
- Post-workout food
  - High protein and high simple sugar within 30 minutes of workout
- General nutrition
  - Track protein, carb, fats consumption ratio

High Intensity Interval Training and its role in strength training

- Improvements in cardiovascular performance
- Promote loss of fat tissue while conserving muscle mass
- Completion of cardiovascular training in a short time period

When and how to apply advanced training techniques such as pyramids or strip sets

- Recognize that a moderate strength level is required before including advanced training techniques
- Advanced training techniques are used to get past plateaus
- Small changes to exercise programs can alleviate boredom and re-introduce progressive overload

#### **Content – Elaborations**

# Overtraining symptoms and prevention

- · Symptoms of overtraining
  - Decreases in strength
  - Prolonged excessive soreness
  - Decreased motivation to train
- Prevention of overtraining
  - Acknowledgement that rest is an essential component of strength training
  - Understanding that progressive overload is specific to individuals
  - Approval of workout program by teacher to ensure that individual muscle groups are not going to be trained too frequently

### Weight room etiquette and safety procedures

- Etiquette
  - Appropriateness of exercises in different areas of the gym
  - Correct use and cleaning of equipment
  - Avoiding excessive noise
  - How to correctly "work in"
  - Appropriate amount of time to spend of a given piece of equipment
- Safety procedures
  - Correct methods for moving weights
  - Correct methods for re-racking plates and bars
  - Understanding of correct footwear
  - Reporting of accidents, injuries and damaged equipment.

# Correct spotting techniques

- Spotters hands close to bar when partner doing overhead lifts
- Only providing as much help as necessary
- Proper hand position for spotter

# Correct form for all exercises

- Demonstrate correct movement pattern for all lifts
- Identify and correct movement pattern for other lifters

# Progressive overload is necessary for continued development

- Muscles need to continually be challenged in order to promote changes in strength
- Monitoring the amount of weight lifted is necessary in order to plan for progressive overload
- Without progressive overload, strength will not change and muscles will not hypertrophy

## Supplements can be dangerous

- Which supplements have been proven to be safe
- Which supplements have been proven to be unsafe
- Are the claims made by supplement companies realistic

#### **Content – Elaborations**

# Critique of exercise programs

- Is a certain exercise program relevant for a specific set of goals
- Is a given exercise program reasonable for certain individuals
- What components are lacking from a given exercise program

## Technology and training

- Heart rate monitoring and its relation to exercise goals
- Observation and critique of own movements through video analysis
- Trial of various exercise and nutrition apps

### **Recommended Instructional Components:**

Direct instruction

Indirect instruction

Modelling

Student led instruction

Analysis and critique of athletic articles

Video analysis

# Recommended Assessment Components: Ensure alignment with the Principles of Quality Assessment

# Daily evaluation

- Student maintenance of daily training journal
- Daily student assessment of effort
- Daily teacher assessment of effort and correction of technique

# Monthly evaluation

- Re-visit and adjust goals and exercise programs
- Fitness and strength testing
- Movement testing: Students show that they know how to properly execute specific exercises
- Athletic article analysis

# **Learning Resources:**

Coach and Athletic Director Periodical

Encyclopedia of Weight Training. Dr. Paul Wood

Strength and Conditioning for young athletes; Scott Roberts

Power Lifting; Barney Groves, PhD.

Strength and Conditioning Journal, BAP publishing, Shawn Prokopetz

#### **Additional Information:**

#### Benefits of strength training:

- Enhances bone modeling to increase bone strength and reduce the risk of osteoporosis
- Strengthens connective tissues to increase joint stability and help prevent injury
- Increases functional strength for sports and daily activities
- Increases lean body mass and decreases non-functional body fat
- Raises metabolic rate because of an increase in muscle mass
- Improves self-esteem and confidence
- · Decrease risk of diabetes and cardiovascular disease
- Improved sleep and metabolic function
- Decreased risk of suffering depression
- Decreased risk of being overweight or obese
- Decreased stress
